

Mozambique Fishing Feasibility Study

July 2013

Confidential

Executive Summary

This document assesses the feasibility of establishing a domestic tuna fishing fleet in the Republic of Mozambique (the "Project"). This feasibility study has been prepared to assist the Republic of Mozambique in reviewing the technical viability of the Project and its financial sustainability.

Background

- The Mozambique Ministry of Fisheries has long recognised the social and economic importance of the tuna fisheries and the disadvantages of not having a national tuna fishing fleet resulting in the exploitation of Mozambique fishery resources by foreigners with no benefits to the Mozambican economy.
- The Ministry has taken a number of steps toward improving the fishing industry, including:
 - Achieving Indian Ocean Tuna Commission ("IOTC") membership in 2012
 - Passing the Fisheries Master Plan that sets out the Ministry's fisheries strategy until 2019
 - Sponsoring a new fisheries law that is aimed to better serve the interests of the country
 - Establishing the Strategic Plan for Development of Tuna Fishery on July 9th 2013 (The "Tuna Development Plan")

The Tuna Development Plan

- Development objective of this Strategic Plan is to foster a greater contribution of the tuna fishery in the socio-economic development of the country through increased recovery and control of the tuna fishery in the EEZ, and participation in strengthening the management of tuna in the Indian Ocean by IOTC, to maximize the benefits of this fishery to Mozambique.
- The first step in Mozambique's Tuna Development Plan is to phase the replacement of foreign tuna fishing vessels with vessels that will fish under the Mozambique flag and achieve the socio-economic objectives of the government.
- The plan presented to the IOTC by Mozambique Ministry of Fisheries proposes a fleet of up to 130 vessels in the next 15 years (30 on the next 2 years).
- The IOTC is expected to introduce a tuna quota system to protect the tuna resource in the next 2 years with quota allocations potentially based on fleet size per country. This makes it critical for Mozambique to establish its tuna fleet as soon as possible.

Executive Summary (continued)

Empresa Moçambicana de Atum, S. A. ("EMATUM")

- EMATUM, (a company established by the Ministry of Finance, the Ministry of Fisheries and the Ministry of Interior of Mozambique) has received a proposal from Abu Dhabi Mar LLC to supply to Mozambique 24 tuna fishing vessels and 3 patrol trimarans (the "Project").

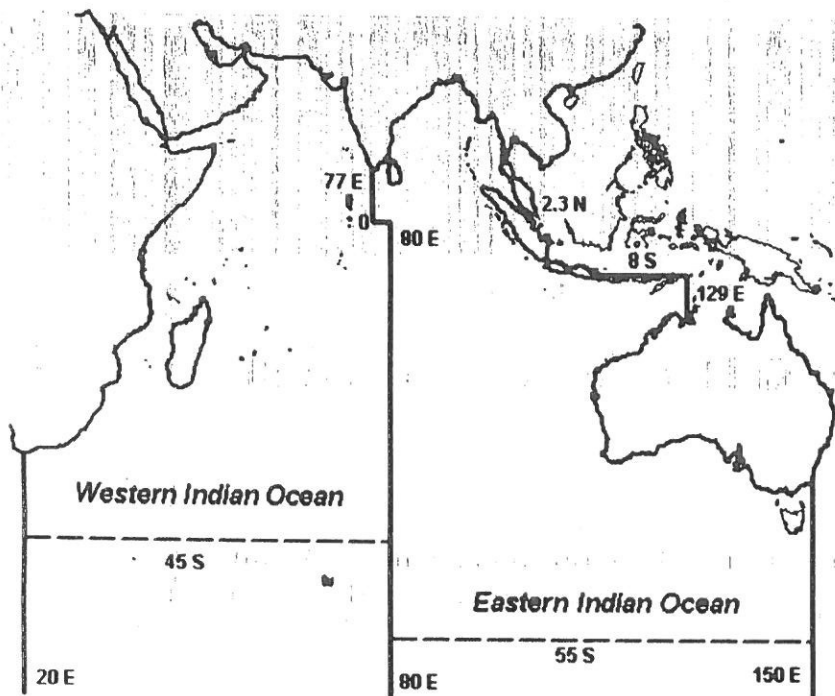

Abu Dhabi Mar LLC ("ADM")

- ADM forms part of the largest privately owned worldwide shipbuilding and naval contracting groups. ADM's affiliated companies and group members comprise leading international technical and professional naval and marine institutions notably:
 - Constructions Mecaniques de Normandie from France
 - Abu Dhabi Mar LLC from Abu Dhabi, United Arab Emirates ("ADM")
 - Nobiskrug from Germany
 - ADM Kiel from Germany
 - Lindenau from Germany
 - Hellenic Shipyards from Greece.
- ADM has also identified financing from the capital markets for the Project. It is expected that the financing will be self-sustaining and whilst requiring a guarantee from the Ministry of Finance, will not place a burden on the State Budget while at the same time providing the following benefits to Mozambique:
 - Increasing GDP by over \$200mn per annum
 - Improving the balance of payments
 - Providing significant local employment
 - Developing a sustainable fishery resource for Mozambique
 - Providing food security
 - Developing a maritime industry in Mozambique (ADM has committed to technology transfer and to building a proportion of the fleet in Mozambique (subject to local approvals)).

Tuna Fishing Fleet for Mozambique – Strategic Importance

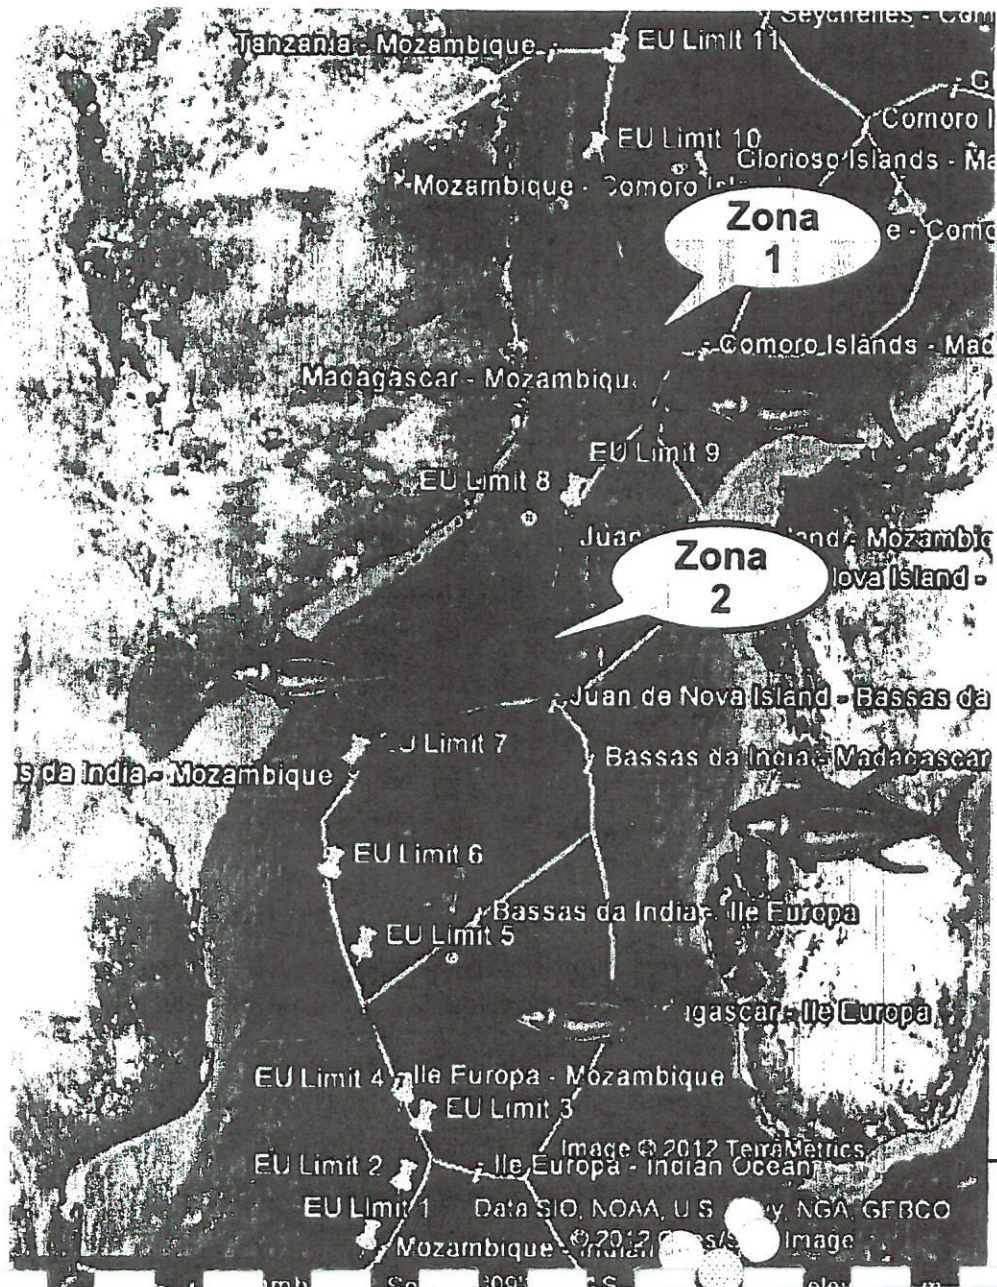

Tuna Fishing – a Valuable Resource

- Tuna is one of the most economically important fishery resources globally and its demand has grown continuously in the last 30 years.

- In 2010, the catch totaled 434 million tons, equivalent to U.S. \$ 2-3 billion and the annual catch potential in the Indian Ocean is estimated at 80 million tons of tuna per year.
 - The Indian Ocean contributed 24% of this production, representing the second most important zone for tuna fishing in the world
 - The West Indian Ocean (including Mozambique) is responsible for about 80% of all tuna catch in the Indian Ocean
- This fishery is particularly significant for the economies of island states that have large EEZs (Seychelles, Mauritius and Madagascar)
 - Mozambique has the 5th largest EEZ in the region after these island states and South Africa but has been unable to benefit from this valuable resource due to the lack of a national fishing fleet
- The Indian Ocean Tuna Commission (IOTC) is responsible for the management of tuna and tuna-like species in the Indian Ocean
 - The IOTC has endorsed Mozambique's plan to build up to a fleet of 130 tuna fishing boats to exploit the resource available to it by phasing out the current foreign fishing fleet (currently totaling 129 ships)

Mozambique Tuna Fisheries – a Valuable but Underutilised Resource

- Currently 20 000 tons of tuna are caught per year in Mozambique EEZ as reported to the IOTC, valued at c. \$200 million at current prices for tuna.
- However, completely dominated by foreign fishing vessels
 - 129 vessels (average of 125 licenses p.a. over last 10 years) currently hold tuna licenses from Mozambique Ministry of Fisheries, of which only 1 vessel is Mozambican.
 - Majority vessels are from Japan and the EU (under the EU/Mozambique Fishery Partnership Agreements) where tuna prices are highest.
 - Tuna license fees collected by Mozambique amount to approximately \$4.1 million or just 2% of the value of the resource.
- As the tuna fishing vessels are foreign and export the catch directly without calling on the Mozambican ports, there is
 - No revenue collection beyond the license fees (i.e. 2% of the catch value)
 - No export credit toward the Mozambique balance of payments which is in a deep deficit
 - No job creation for Mozambique population
 - No value added services at the ports and for tuna processing as the vessels never call on Mozambique ports
 - Little control over the tuna fisheries and fishing quantities (only 5 to 7 thousand tonnes reported to Mozambique vs. 20 thousand tonnes reported to the IOTC)

Strategic Plan for Development of Tuna Fishery

Strategic Plan for Development of Tuna Fishery

The implementation of this plan is aimed to help increase the sector's contribution to food production for the population, poverty reduction, balance of payments and the socio-economic development of the country

It is designed in the context of various instruments of national policy and legal framework, including the Fisheries Policy, the Policy and Strategy MCS (Monitoring, Control and Surveillance of fishing), the Fisheries Act and its regulations, especially the REPMAR (General Rules of Marine Fisheries) and the Fisheries Master Plan 2010-2019.

The plan sets out four strategic objectives

- (i) To promote greater contribution of the tuna fishery for food and nutritional security of the population,
- (ii) encouraging a greater contribution of the tuna fishery in the economic and social development of the country,
- (iii) Promote a greater contribution to the balance of payments, and
- (iv) strengthen the effective control of the country on the tuna fishery in its EEZ, and promote their sustainable management.

Project Rationale Supports the Tuna Development Plan

| RATIONALE | CURRENT STATUS | AFTER PROJECT IMPLEMENTATION |
|--|--|--|
| 1 Employment | <ul style="list-style-type: none"> Only foreign labour | <ul style="list-style-type: none"> National fleet will employ exclusively Mozambique workers Training by ADM will increase number of skilled Mozambican crew and seamen By creating auxiliary services, create a spillover employment effect in a newly developed tuna industry in Mozambique |
| 2 Revenues for budget | <ul style="list-style-type: none"> Average of 125 licenses per year at \$32,000 per license generates c.\$4.1 million of fees, or mere 2% of the value of the tuna catch | <ul style="list-style-type: none"> 20 000 tonnes of tuna at current market prices for tuna could bring c.\$190 million to the Mozambique Government budget and the proposed Project is targeting higher revenues Moreover, a national fleet would be able to access tuna outside of Mozambique waters for the benefit of Mozambique further increasing the revenue potential to north of \$200 million |
| 3 Balance of Payments | <ul style="list-style-type: none"> <u>NO</u> contribution to export figures -- the tuna catch is kept on board of the foreign vessels and transferred or transhipped at sea, support vessels, or discharged in foreign ports | <ul style="list-style-type: none"> Since caught by a Mozambique fishing fleet and earmarked mainly for export, tuna fishing for the benefit of Mozambique could contribute north of \$200 million to the exports balance |
| 4 Value added services | <ul style="list-style-type: none"> None | <ul style="list-style-type: none"> Promote the use of national ports, including transshipment, landing, storage and processing of tuna Once a national fleet exists, investment in such tuna processing facilities will be more relevant and funding can be generated from the proceeds of tuna exports |
| 5 Management of the tuna fisheries of Mozambique | <ul style="list-style-type: none"> Little control Underreporting | <ul style="list-style-type: none"> Focus on sustainable fishing and best practices, such as longline fishing rather than using purse seine technique Accurate reporting Monitoring with the help of 3 highly specialised trimaran vessels |
| 6 Quota allocation from IOTC | <ul style="list-style-type: none"> Concerns that Mozambique may receive a smaller quota allocation from the IOTC due to lack of a national fleet (as foreign vessels claim their catch under their country's flag) | <ul style="list-style-type: none"> Will ensure an appropriate quota allocation Once the quota is established by the IOTC, the Mozambique fishing fleet will have first rights on the quota |

ADM Proposal for the Project Addresses the Goals of the Plan

| SPECIFIC GOALS OF THE PLAN | ADDRESSED BY THE PROJECT | COMMENTARY |
|--|--------------------------|---|
| Flagging of a national fleet | ✓ | <ul style="list-style-type: none"> ■ ADM will supply 27 ships in total to be flagged under Mozambican flag on an accelerated schedule of 19 months responding to the urgency of the situation |
| Promote national crew training | ✓ | <ul style="list-style-type: none"> ■ Extensive training and transfer of technology are included as part of the supply contract |
| Promote investment in the industry | ✓ | <ul style="list-style-type: none"> ■ The Project is expected to generate sizeable revenues that could be used to fund tuna storage and processing plants, such as the current plan for tuna development plant at Nacala port and to develop a maritime industry. |
| Promote the use of national ports | ✓ | <ul style="list-style-type: none"> ■ The new fleet will use the national ports exclusively having a strong multiplier effect on employment and development |
| Review the terms of existing license agreements | ✓ | <ul style="list-style-type: none"> ■ The new fishing fleet will phase out a number of the licenses issued to foreign ships, making the remaining licenses more valuable ■ Therefore, Mozambique Ministry of Fisheries will be in a position to command a higher license price |
| Promote knowledge and control of the national resource | ✓ | <ul style="list-style-type: none"> ■ The Trimarans supplied as part of the Project will monitor the tuna fisheries real-time, preventing illegal fishing and helping ensure fishing is done in sustainable way in accordance with IOTC regulations |

Supply of a Fishing Fleet for Mozambique - Project Overview

- Abu Dhabi Mar LLC has designed an operational concept aimed to develop a prosperous, responsible and safe tuna fishing activity in Mozambique waters.
- The Project will include the provision and all associated training for a Land Operations Coordination Centre as well as the vessels described below

21 Long Liner Vessels

Long liners will fish for tuna as follows:

- Receiving data and position of long line authorized zone from Land Operations Coordination Centre
- Longline fishing operations
- Tuna hygienic treatment and storage
- Bait storage
- Design is best in class in the industry and designed to comply with the anticipated Indian Ocean African countries agreement regarding fishing resources

3 Bait Fishing Trawlers

Trawlers for bait fishing:

- Receiving data and position of authorized fishing zone from Land Operations Coordination Centre
- Receiving data about fish localization
- Fish for bait for pelagic tuna fishing activities.
- Store and distribute bait for long liners

3 Trimarans

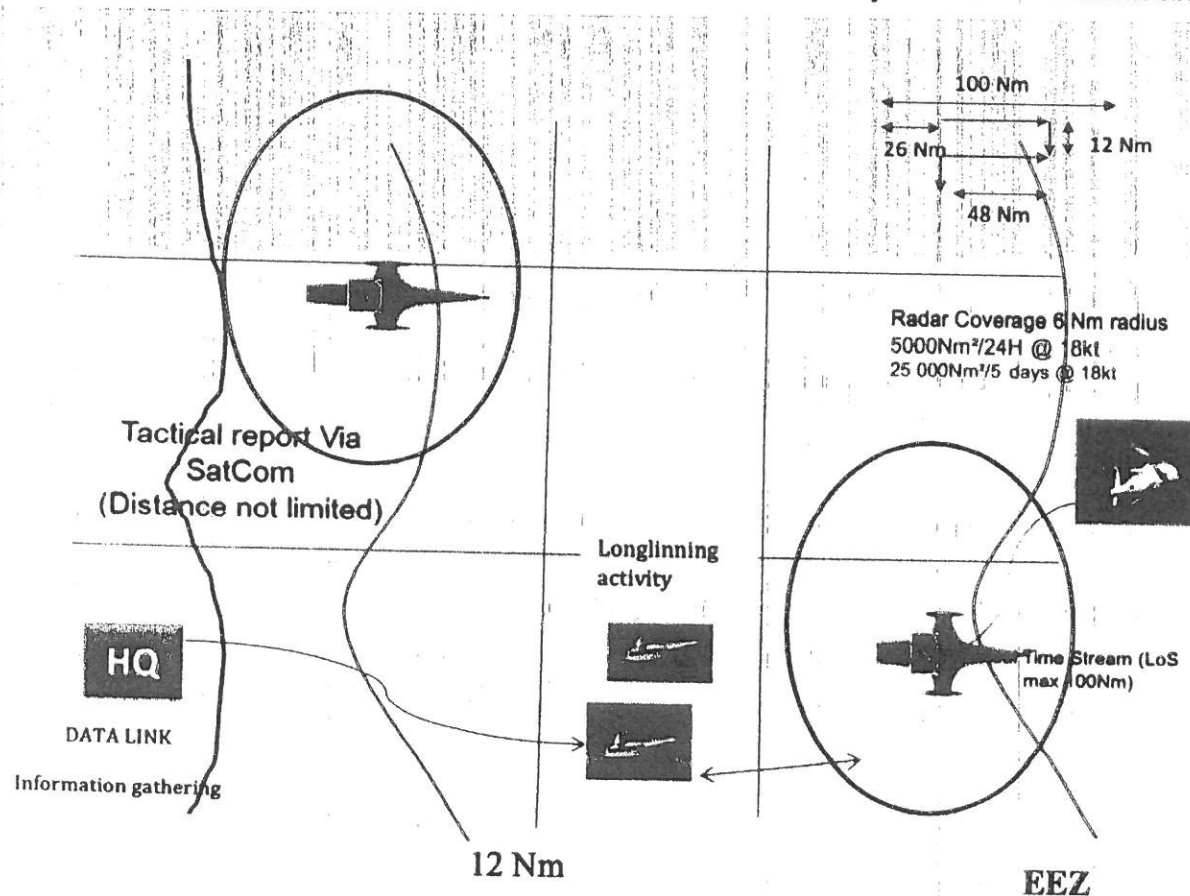

Trimarans for maritime surveillance and coordination:

- Protection of national waters against illegal fishing activity
- Control of Fishing Activities;
- Co-ordination and optimisation of fishing activities;
- Participation in ecological fishing activities (controlled fishing activities)
- For fleet management purposes it is expected that two trimarans will be in patrol in Mozambique waters and one will be at harbour.

Project Overview – A State of the Art Fishing Operation

The Land Operations Coordination Centre provided as part of the Project is designed to control and organize fishing activities as follows:

- Receive fishing data from Patrolling Trimarans in fishing zone and assist in fish location
- Coordinate fishing activities between the long liners and bait trawlers (or crustacean trawlers)
- It is envisaged that all data transfer will be made by Satellite data link and other communication means

Importantly, the Project includes Intellectual Property and Transfer of Technology:

- The Company operating the Fishing Fleet will be granted a royalty free, non-exclusive licence to use relevant intellectual property related to the vessels..
- The licence will permit construction in Mozambique for Mozambique and (subject to ADM's consent) third party countries.
- The necessary and associated technology transfer packages will similarly be provided.

Economic Feasibility of a Mozambique Tuna Fishing Fleet

Revenue Potential

- The revenue potential for the proposed tuna fleet is north of \$200 million at the current market prices for tuna (adjusted for inflation)
- Assuming 24 longliner and fish bait trawlers are delivered per the procurement contract delivery schedule below
- Total catch of 23 040 tonnes once all boats are delivered

Estimated Revenues – Year 1 to year 4 from funding

| USD | H1 | H2 | Year 1 | H1 | H2 | Year 2 | H1 | H2 | Year 3 | H1 | H2 | Year 4 |

Confidential

Tuna Pricing Assumptions

- There are a number of varieties of tuna that command a range of prices so it is important to consider the relative weight in the catch of the various species, especially the more valuable ones (yellowfin, bigeye and albacore)

Annual catch in Mozambique EEZ per type of tuna

| Year | Skipjack | Albacore tuna | Bigeye tuna | Yellowfin tuna | Swordfish | Black marlin | Other Tuna | Total Reported Catch | No vessels |
|---------------------------------|--------------|---------------|--------------|----------------|-----------|--------------|------------|----------------------|------------|
| 2004 | | | | | | | | 17,470 | |
| 2005 | | | | | | | | 5,629 | 143 |
| 2006 | | | | | | | | 6,668 | 142 |
| 2007 | 641 | 541 | 350 | 3,402 | 218 | 1 | 428 | 5,581 | 161 |
| 2008 | 2,550 | 341 | 322 | 2,647 | 209 | 9 | 471 | 6,549 | 122 |
| 2009 | 1,942 | 106 | 173 | 824 | 721 | 9 | 538 | 4,313 | 111 |
| 2010 ⁽¹⁾ | 764 | 99 | 166 | 1,267 | 600 | 27 | 603 | 3,909 | 71 |
| Total 2007-2010 | 5,897 | 1,087 | 1,011 | 8,140 | | | | | |
| Proportion per Tuna Type | 37% | 7% | 6% | 50% | | | | | |

Source: IOTC report. (1) Incomplete data, excludes EU catch statistics.

| Type of Tuna | Av. Historical Proportion in Mozambique EEZ | Average Market Price |
|--|---|----------------------|
| Yellowfin Tuna | 50% | \$13.94 |
| Skipjack Tuna | 37% | \$2.00 |
| Albacore Tuna ⁽¹⁾ | 7% | \$10.33 |
| Bigeye Tuna | 6% | \$15.79 |
| Implied Weighted Average Market Price | | \$9.45 |

(1) Based on FX rate of Eur/ US\$ of 1.33.

Confidential

Cost Assumptions

Licenses:

- Cost of a tuna license for a Mozambique flagged ship is \$10,000 per vessel per year and is not based on the amount of tuna catch
- As tuna is a highly migratory species, the tuna fishing ships usually follow the tuna schools and obtain licenses from a number of neighbouring countries, including Madagascar, Mauritius and Seychelles. Therefore \$100,000 per vessel is budgeted for obtaining international licenses

Export transport costs: estimated at \$0.25 per kg of tuna as the catch is destined for export to the markets with highest demand, including Japan and EU

Command Center:

| Item | Annual Cost - USD | Assumptions |
|--------------------------------|-------------------|--------------------------------|
| Personnel | \$38,304 | 6 personnel * 12 months * €400 |
| Administrative consumable | 7,980 | |
| Electronic systems maintenance | 7,980 | |
| Total | \$54,264 | |

Tuna Longliners/ Trawlers Operational Costs per year:

| Item | Annual Cost - USD | Assumptions |
|--|-------------------|---|
| Personnel | \$44,688 | 7 personnel * 12 months * €400 |
| Maintenance Costs | 133,000 | docking, paint, repairs, spares |
| Mobile Fishing equipment renewal | 39,900 | |
| Fuel and consumable | 678,134 | |
| Fuel | 665,000 | 2,000 L per day * 250 days * €1.0 per L |
| Oil | 1,496 | 3 L per day * 250 * €1.5 per L |
| Food and Consumables on Board | 11,638 | 7 persons * 250 days * €5.0 |
| Longliner/ Trawler Costs per Vessel | \$895,722 | |

Trimaran Vessels Operational Costs per year:

| Item | Annual Cost - USD | Assumptions |
|-------------------------------------|-------------------|---|
| Personnel | \$82,992 | 13 persons * 12 months * € 400 |
| Maintenance Costs | 39,900 | docking, paint, repairs, spares |
| Fuel and consumable | 354,811 | |
| Fuel | 332,500 | 1,000 L per day * 250 days * €1.0 per L |
| Oil | 698 | 1.4 L per day * 250 * €1.5 |
| Food and Consumables on Board | 21,613 | 13 persons * 250 days * €5.0 |
| Trimaran Op Costs per Vessel | \$477,703 | |

Financing Structure

- The Projected will be financed with a 7 year, \$800 million financing for the Republic of Mozambique to acquire a fishing fleet and related services per the Project contract.
- The financing will benefit from a guarantee from the Ministry of Finance of Mozambique and will be fully underwritten by 1 or more international banks.
- The proposed financing will be raised in the international bond markets by an SPV established by the bank.
- The proceeds of the bond issue will be lent to the project company as set out in the diagram below.
- The loan to the Borrower will have a Fixed Interest rate of 7 year USD swaps + 3.2%, and an upfront fee of 1.6% – any further financing cost will be borne by the Project contractor, allowing for predictable fixed financing cost
- Interest reserve of 1 year will be retained by the Borrower from the proceeds to allow time for the Project to ramp up and generate revenues

Resulting in a Self-Financed Project (Year 1 to Year 4 below)

- Cash balance of \$50,000,000 after funding remains at the Borrower to cover the first year of interest and start-up operating costs
- 2 year Grace period on principal repayments to allow for revenue generation to ramp up

Resulting in a Self-Financed Project (Year 5 to Year 8 below)

- Project expected to cover funding costs of interest and principal
- Debt is repaid in full at the end of Year 7
- Once the financing is repaid, cash generated by the Project is available for reinvestment in Mozambique.

Conclusion

- The Project has clear socio-economic benefits in line with governmental strategy and recommendations
- Plans for a Mozambican fishing fleet have been presented to the IOTC and endorsed by it
- Building a fishing fleet and related tuna industry has been a priority for Mozambique for a number of years and is the aspiration of a number of African coastal countries, such as Tanzania
- Based on the assumptions set out in this presentation, which reflect current market levels, the Project is expected to be self-funding and to generate revenues in excess of the funding costs
